

***Experts Agree,  
we must act now  
to secure reliable  
power for our future.***

Energy experts know the importance of reliable power. Our nation's power grid system is at risk. Five years ago, the blackout in the northeast was a warning. Before it was over, nearly 40 million Americans were affected and as much as \$8.2 billion were lost.

Clinton Miller, former Commissioner of the Virginia State Corporation Commission and former State Delegate, agrees. **"In order to stimulate the kind of economic growth our citizens need and expect, there's no doubt the present infrastructure for transmission in Virginia and throughout the United States needs to be addressed."**

Reliable energy is good for business, good for our region and good for our nation. The path toward it is clear...the Potomac-Appalachian Transmission Highline.
